

BREAST IMAGING RADIOLOGIST - HARTFORD, CT AREA

Jefferson Radiology, the largest radiology private practice in the state of Connecticut, is looking to recruit a fellowship trained breast imaging or women's imaging radiologist to join our growing organization. Jefferson Radiology, established in 1963, is a 50-physician subspecialty, partner-owned group practice in Hartford, CT.

Jefferson Radiology offers the full spectrum of diagnostic imaging and interventional services. As leaders in diagnostic imaging and interventional radiology, our fellowship trained physicians and highly trained staff are committed to providing exceptional patient care and responsive service. Our clinical resources, supported by a sophisticated business and technological infrastructure allow us to provide the highest quality care. In addition to MQSA, ACR and ICAVL accreditation, we recently achieved Joint Commission accreditation. Further, we were named by *Radiology Business Journal* as one of "The Fifty Largest Radiology Practices" in the country, and in the most recent Hartford Magazine's Best Doctors edition, of the 20 radiologists that made the list, 14 were Jefferson Radiology physicians.

The all-digital practice, with comprehensive RIS/PACS capabilities, interprets over 750,000 exams a year. Aligned with Jefferson Radiology's goal of employing the most sophisticated, state-of-the-art technology, Jefferson has the only advanced imaging analysis and 3D lab in the state, and is one of a few such advanced facilities in the country. This infrastructure is a confluence of our Information Technology, our seasoned technologists, our advanced technology and our experienced physician leadership.

We have nine private outpatient offices with multiple modalities offered in each one. Additionally, Jefferson Radiology is the exclusive provider of radiology services at multiple hospitals including Hartford Hospital, an 850-bed tertiary care facility and major teaching hospital in northern and central Connecticut, as well as Connecticut Children's Medical Center, Johnson Memorial Hospital, and Windham Hospital.

Jefferson Radiology operates and directs a free-standing, accredited radiology residency program at Hartford Hospital with approximately 20 residents and an active teaching program, as well as a radiology technologist training program.

The ideal candidate will be interested in working predominantly, although not exclusively in mammography. Candidates must be comfortable with conducting screening and diagnostic mammography. Incumbents will be expected to perform stereotactic as well as Ultrasound and MRI guided biopsies, and MRI, Ultrasound and Mammography guided needle localizations. Recent fellowship graduates as well as applicants with less than 5 years of experience are encouraged to apply.
